**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 1-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hall et al. (U.S. Patent # 6,137,702) in combinations with Hostani et al. (U.S. Patent # 6,788,556).

Hall et al. disclose the claimed subject matters a control signal generating for a switching regulator (figure 1-2), including a comparator (figure 2, item 90), a reference voltage (figure 2, item VREF2), a flip-flop (figure 2, item 74), on-time set and resets (column 6, line 1-65 and column 8, line 20-70). However Hall et al. does not disclose the utilization of the technique for a control of maximum on-time limit. Hostani et al. teaches the utilization of the similar technique for a control of on-time limit (column 6, line 1-60). It would have been obvious one having ordinary skill in the art at the time the invention was made to modify Hall et al.'s control circuit by utilizing the technique taught by Hostani et al. for the purpose of protection of the circuit elements.

***Allowable Subject Matter***

2. Claims 18-21 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
